EDUCATION

Wellesley College, Wellesley, MA — Aug. 2019 – Present
Candidate for B.A. in Computer Science & B.A. in Economics, 3.96/4.0
Honors Thesis: "Behind the Scenes: Examining Efficacy of Race Classification Models for Representation on TV"

Massachusetts Institute of Technology, Cambridge, MA — Sept. 2020 – Present
Cross-Registered Student, 5.0/5.0

University of Oxford, Oxford, England — Sept. 2021 – Dec. 2021
Visiting Student in Computer Science at Worcester College

RELEVANT SKILLS

Languages Python (*NumPy, PyTorch*)**,** Swift (*RxSwift*), JavaScript (*Node.js)*, Stata, Java, SQL, C# (*.NET*), HTML/CSS

Courses Natural Language Processing, Machine Learning, Demand Modeling, Advanced Econometrics, Networks

Projects

Honors Thesis: I explore various machine learning, natural language processing, and ensemble learning techniques, including DistilBERT, Naive Bayes, and K-nearest neighbors to improve upon existing racial classification methodologies.

COVID-19+Transportation: A study examining Twitter's potential as a consistent source of individual mobility data by analyzing shifts in balance between stages of the COVID-19 pandemic. It presents a highly curated dataset of tweets about pandemic and travel available to the research community via GitHub.

Root.AI Redesign: A second-generation iOS application which tracks user-inputted data in order to detect statistically significant lifestyle patterns affecting digestive health. Retrofitted with SwiftUI architecture.

EXPERIENCE

Lyft • New York, NY & San Francisco, CA — May 2022 – Aug. 2022; Jun. 2021 – Sept. 2021
Software Engineer Intern
- Airports/Venues: Revamped a 3+ year old legacy experience for the "pre-ride dispatch" feature (frequently used by drivers for airport pickups); established consistency between the pre-ride dispatch and standard rideshare flow, decreasing both driver distraction and tech debt accumulation; collaborated with product, design, and server to ensure timely execution.
- Driver App Platform: Built an upcoming feature from the ground up while implementing modern iOS patterns, such as declarative and reactive programming; produced technical specification and handoff documentation for future iterations.

Root.AI (Start-Up) • Queens, NY (Remote) — Jul. 2020 – Jul. 2022
Full Stack Developer Intern
- Collaborated with executives to prepare early-stage fundraising pitch decks for an insights-driven iOS app that performs multivariable analysis (via a neural network algorithm) to analyze advanced dietary patterns.
- Developed the second-generation iOS app and Node.js backend while complying with design specifications. Responsible for all phases, including implementation, testing, and debugging.

Bristol Myers Squibb • Lawrenceville, NJ (Remote) — Jun. 2020 – Aug. 2020
C# Developer Intern
- Developed and deployed a C# thick-client application for an ultrasonic device used to measure micro-sized well plates and tube racks. Gained familiarity with agile sprint cycles.

HONORS AND ACHIEVEMENTS

CS Research Mentorship Program, *Google* (Feb. 2023) • NeurIPS Conference and Travel Grant, *Wellesley College* (Nov. 2022) Camellia Collaborative Excellence Leadership Award, *Wellesley College* (May 2021) • Early ID Leadership Program, *Citi Technology* (Mar. 2021) • Discovering Fin+Tech Program, *GTS* (Jan. 2020) • Above and Beyond CS Program, *Facebook* (Sept. 2020) • Hackathon Contest Winner, *Boston TechTogether* (Nov. 2020) • *Citi x Wellesley* Case Competition 1st Place, *Citi* (Oct. 2020)
