Jenny Wang

jw10@wellesley.edu • (203) 558-7315 • jennywang.me
342 Guinevere Rdg, Cheshire, CT 06410

EDUCATION

Wellesley College, Wellesley, MA — Aug. 2019 – May 2023 (Expected)
Candidate for B.A. in Computer Science & Economics, 4.0/4.0

RELEVANT SKILLS

Languages Swift, Python, Java, C#, SQL, HTML/CSS, JavaScript

Technologies RxSwift, SwiftUI, RESTful APIs, Node.js, MySQL, .NET Framework, Agile/Scrum Methodology

Courses Machine Learning, Networks, Systems, Algorithms, Models of Computation, Linear Algebra, Combinatorics

Projects

RateMyMeal: An iOS app that determines the nutritional and taste value of meals based on an individual's preferences. *Swift, CocoaPods, Node.js, Bootstrap, Spoonacular API, MySQL, Sequelize.* (Internship: Root.AI)

Ambient: An eco-friendly application that crowdsources temperature preferences and learns to adjust via group sentiment. *Flask, Amazon DynamoDB, SQLite, Wolfram API.* (Hackathon: TechTogether Boston)

VolumeChecker: An integrated user interface designed to communicate with an ultrasonic machine and populate data measured by the instrument. *C#, .NET Framework, RESTful Web APIs* (Internship: BMS)

Russian Twitter Interference Study: A console program that parses TwitterTrails research data related to Russian Interference during the 2016 election. *Java IO, yED.* (Course: Data Structures)

EXPERIENCE

Lyft • San Francisco, CA (Remote) — Jun. 2021 – Aug. 2021
Mobile Software Engineer Intern

Root.AI • Queens, NY (Remote) — Jul. 2020 – Present
Software Engineer Intern
• Collaborated with company executives to prepare early-stage fundraising pitch decks for an insights-driven iOS app that utilizes supervised machine learning algorithms to analyze advanced dietary patterns
• Learned relational database management systems (MySQL, Postgres) to persist user data in AWS cloud computing server
• Designed a custom REST API and implemented the Spoonacular API to access nutrition information and handle user-specific operations

Bristol Myers Squibb • Lawrenceville, NJ (Remote) — Jun. 2020 – Aug. 2020
C# Developer Intern
• Designed, developed and deployed a C# thick-client application for a volume verification device which used ultrasonic technology to measure micro-sized well plates and tube racks
• Through Scrum sprint cycles, independently built a user interface and DLL while ensuring optimal performance, improving volume measurement accuracy and repeatability by 30%
• Prepared and improved the UI/UX design, executable files, and software documentation for future deployment at multiple facilities

HONORS AND ACHIEVEMENTS

• Visiting Student, *Oxford University* (Sept. 2021 - Dec. 2021), Early ID Leadership Program, *Citi Technology* (Mar. 2021), Discovering Fin+Tech Winter Program, *GTS* (Jan. 2020), Above and Beyond Computer Science Program, *Facebook* (Sept. 2020 – Nov. 2020), Hackathon Contest Winner, *Boston TechTogether* (Nov. 2020), *Citi x Wellesley* Case Competition 1st Place, (Oct. 2020)
• SAT: 1550/1600 (Math: 800/800), National Merit Corporate Scholar, U.S. Congressional Award Bronze Medalist
